Emergency, Pandemic and humanitarian Public Health Procurement and Supply Chain Management

The course is targeted at health supply chain professionals in public health programs (donors, government, NGOs, civil society, academia) who are, or will be, involved in formulating effective responses, developing, planning, preparing and implementing of Emergency, Pandemic and Humanitarian Public Health Procurement and Supply Chain Management.

Course Overview

This course will give countries the capability to formulate and develop the PSM inputs in formulating and developing the PSM inputs and planning required to contribute to a national health commodity emergency and pandemic planning.

Investing relatively small amounts of time and resources up-front to reach a minimum level of preparedness can significantly improve outcomes for vulnerable populations when an epidemic occurs, minimizing the impact on people and infrastructure. The same set of supply chain preparedness activities are applicable across most infectious threats and many resources are available to help countries prepare

When it comes to emergency supply chain management, a little preparedness will go a long way
