

Development and Digitization of Technical Content for Training of RNTCP and Healthcare Personnel

Content designed and developed by Empower School of Health with support from Central TB Division (CTD), Government of India, The International Union Against Tuberculosis and Lung Disease (The UNION) and Foundation for Innovative New Diagnostics (FIND).

Empower is working with **The Union** (International Union against Tuberculosis and Lung Disease) and **FIND Diagnostics** to transform technical PMDT related contents (Policies, Guidelines, Standard Operating Procedures for Central TB Division of the Government of India) to high quality e-learning course materials. The training material is expected to be rich in media and incorporate design (e.g. texts, graphics, audio, video case studies, quizzes, animation) to engage learners, promote interest, and support knowledge.

The e-Module would be developed in English with the ability to be translated to Hindi and other Indian languages. The layout of content and design would be both desktop and mobile friendly.

The entire content will then be uploaded on WHO Country Office (WCO)- India's e-Learning platform- 'Swasth-e-Gurukul'.
